Vinyl

All our vinyl materials are **MADE IN THE U.S.** and **FABRICATED LOCALLY** in Dillsburg, PA!

Don't choose just any gate - choose a premier gate you know **WON'T SAG!**

Premier Gate! TECHNOLOGY!

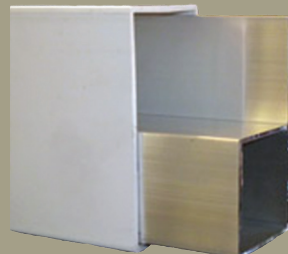

UNIQUE VINYL FEATURES

- Low maintenance
- Durable and long lasting
- Split resistant
- Never needs painted
- No rotting, cracking, or splintering

Aluminum makes it last!

Our picket fences are reinforced with aluminum in the bottom rail to prevent sagging.

CHOOSE QUALITY

Our vinyl products are made with the highest quality pure virgin PVC and are backed by a lifetime warranty. Each of our fence styles are designed to meet your privacy, security and aesthetic needs. Our fabrication shop can customize or create almost any style according to your specifications. You'll receive a quality product and a quality experience that you will appreciate now and for years to come.

NOT JUST ANOTHER GATE

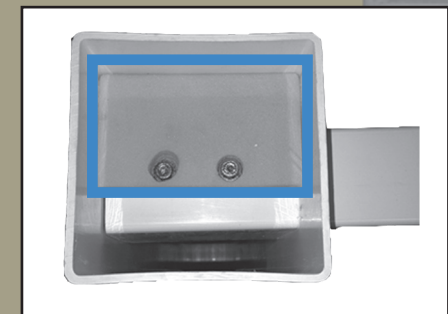

It didn't take long for us to notice that gates can cause the most headaches to customers. Years of opening and closing and exposure to the elements tends to wear down the durability of a gate.

We decided to fix the problem.

Our vinyl gates are reinforced with a support block in the gate upright. The block surrounds the rail inserts and guarantees **NO SAGGING!**

Customize your gate!

Our gates can be customized to match the grade of your property. Read more on the back page.

DIY INSTALL

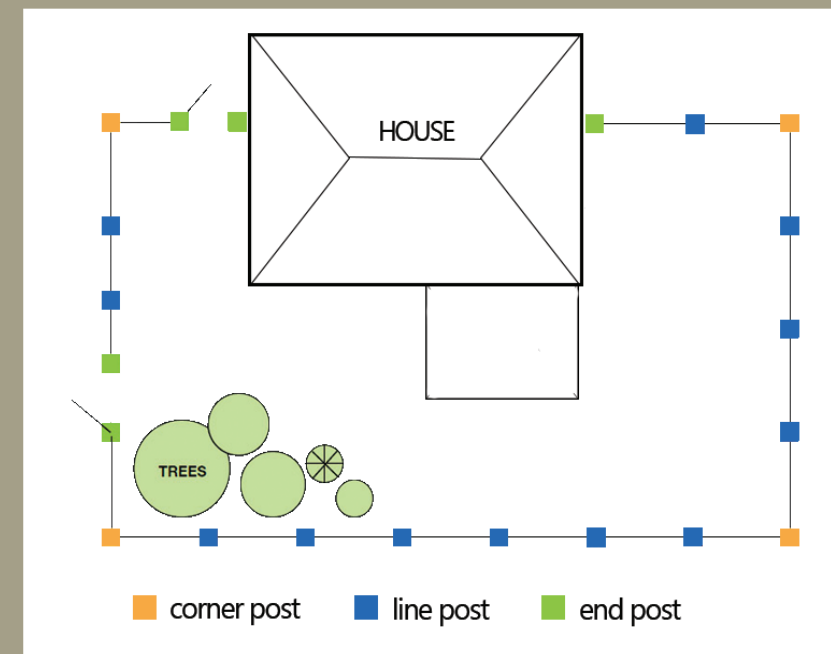

Thinking about installing it yourself?

Whether you are a natural do-it-yourselfer, or if you are looking to cut your costs on installation, installing your own fence can be a simple and rewarding experience. To make it a little easier - here is a quick guide that covers the fundamentals of fence installation.

1.

Before You Start:

- Confirm your property line
- Locate underground utilities
- Research local zoning codes and restrictions
- Check for obstructions

2.

TIP:

Use step two to gather info. for materials or to get an installation quote.

Make Your Preparations

1. Set up Fence Area

Put a stake in the ground at each corner of the desired fence area, and one every 8 feet (if using 6' sections, put stake every 6'), as that is where the posts will go.

2. Decide on Gates

Think about where you would place your gate. Put a stake in the ground at the corners of each gate. The most common gate widths are 3', 4', and 5'.

3. Determine Number of Sections

Measure the total length of the fence and divide by 8, as most panels are sold in 8' sections. (If using 6' sections, divide by 6).

4. Determine Posts

Count the number of different posts you will need. (refer to diagram above)

3.

Install Your Fence

1. Gather Tools

You will need the following for your installation (you can rent these from hardware stores): Torpedo level, circular saw, ready mix concrete, post hole digger, digging bar, stakes and string.

2. Install

Starting with corner or end post; dig holes 6"-12" in diameter and 24"-36" deep. use the center-to-center measurements of the fence style. dig next hole. (Suggest not digging more than 1 hole ahead). Set post to plumb, tamp and secure then insert section. Repeat. Upon completion check line to see if you need to raise or lower posts.
